

Signet 2760 DryLoc® pH/ORP Preamplifiers & Connectors

In-line 2760

Submersible
2760

DryLoc® Electrodes sold separately.

The Signet 2760 pH/ORP Preamplifiers features the DryLoc® connector, providing a robust connection to Signet DryLoc electrodes.

The 2760 preamplifier allows any DryLoc pH/ORP electrode to work with Signet ProcessPro® and ProPoint® pH/ORP instruments. It is also sold as a simple connector for use with other manufacturers' instruments that do not require a preamplified signal.

The DryLoc electrode connector system quickly forms a robust assembly for submersible and in-line installations. Optional NEMA 4X junction enclosures are to extend the preamplifier cable to long distances.

The 2760 submersible preamplifier can also be used as an In-line preamplifier when used with the ¾ in. or 1 in. threaded sensors including the 2724, 2774 and 2764 series electrodes. The 2760 In-line preamplifier can be used with Signet fittings up to DN100 (4 in.) and wet-tap assemblies.

The 2760 pH/ORP Preamplifiers are compatible with the Signet 5700, 8750 and older analog transmitters. The 8900 and 9900 Transmitters require the use of the 2750 sensor electronics, and are not compatible with the 2760 preamplifier.
